
DRAFT. TBD = count not yet available (see PRISMA_draft_2026-11-10.md).
Boxes from 'Reports sought' downward count reports (full-text records); the included box gives studies and their reports.
Block D (supplementary sepsis/ARDS search, 21 retained records, 9 in the workbook) is counted in the database arm only.
Databases 3,836: Ovid MEDLINE 349 (pre-1995 file counted once; the primary set, line 28, was not exported), PubMed 293, Embase 2,462, CENTRAL 732. ClinicalTrials.gov and WHO ICTRP were not searched.
Of the 105 reports sought (screening log), 53 were not retrieved: 39 with no document to retrieve (30 registry entries, conference abstracts, a superseded preprint), 12 sought but not obtained (6 candidate main reports, 3 Block D journal reports, 3 companion protocols or appendices) and 2 wrong PDFs. 52 were assessed, including 2 candidate reports excluded for insufficient data (El-Ghamrawy 2006, Li (Gang) 2016).
Of the 52 assessed, 1 is ongoing without results (RECORDS). Three further ongoing trials (ASTEROIDS, Hong 2022, COLOSSEUM) come from registrations outside the 105 sought; the screening log lists 30 registered or ongoing trials in all (O1).
Other methods: 7 hand-searched trials not retrieved by the databases (Annane 2006, Meduri 2007, Rezk 2013, VANISH, HYPRESS, ADRENAL, Annane 2018 (APROCCHSS main)); provisional. The candidate main reports were found by the databases and are in the database arm: El-Ghamrawy and Li (Gang) excluded for insufficient data, Wagner not retrievable and not randomised, Zhou, Soboleva, Dambrava, Oh and Kapisyzi still to obtain.
